Notes

- Numbers listed under "General Emergency" are typically for unified emergency services or to reach a dispatch center that can connect to appropriate services.
- Many countries have implemented the European standard emergency number 112, which often works alongside national emergency numbers.
- In some countries, mobile phones can dial emergency numbers even when locked, without a SIM card, or with no service/signal (if within range of any carrier's tower).
- Some numbers may vary by region within countries, particularly in countries with less centralized emergency systems.
- Non-emergency police numbers are provided where available for situations that require police attention but are not emergencies.

- Coordinate ranges represent the approximate geographical boundaries of each country (northernmost to southernmost latitude, westernmost to easternmost longitude).
- Primary languages listed may not be the only languages spoken in the country but represent the most widely used official or de facto languages.
- This database was last updated March 2025 and may be subject to change as countries update their emergency systems.
